Technical Document
Installation Step-by-Step Guide

Aiuda Platform

AIUDA is an AI-powered, locally deployed platform designed to support—rather than replace—academic work, while enhancing accessibility, inclusion, and content quality.

It provides tools for **transcribing, subtitling, translating, and analyzing audiovisual and written materials**, ensuring that all data is processed securely within the institutional infrastructure.

🏗️ Arquitectura

- Backend: FastAPI
- Frontend: React (Vite)
- Deployment: Docker

🐋 Docker Installation

Windows

1. Download Docker Desktop:: https://www.docker.com/products/docker-desktop
2. Run the installer and enable WSL 2 (recommended)
3. Restart your computer
4. Verify the installation:

```
docker --version
docker compose version
```

Linux (Ubuntu/Debian)

1.- Add the Docker repository:

```
sudo apt-get update
sudo apt-get install -y ca-certificates curl gnupg lsb-release

curl -fsSL https://download.docker.com/linux/ubuntu/gpg | sudo gpg --dearmor -o
/usr/share/keyrings/docker-archive-keyring.gpg
```

```
echo "deb [arch=$(dpkg --print-architecture) signed-by=/usr/share/keyrings/docker-archive-keyring.gpg] https://download.docker.com/linux/ubuntu $(lsb_release -cs) stable" | sudo tee /etc/apt/sources.list.d/docker.list > /dev/null
```

3. Install Docker:

```
sudo apt-get update
sudo apt-get install -y docker-ce docker-ce-cli containerd.io docker-compose-plugin

sudo usermod -aG docker $USER
newgrp docker
```

4. Verify:

```
docker --version
docker compose version
```

---

5. macOS

1. Download Docker Desktop: https://www.docker.com/products/docker-desktop
2. Install and open Docker
3. Verify:

```
docker --version
docker compose version
```

⚙️ Requirement

- Docker Desktop o Docker Engine + plugin de Docker Compose

🚀 Project Execution

From the project root:

1. Create the environment file:

```
cp .env.example .env
```

2. Edit .env and configure the required variables:

```
AIUDA_SMTP_PASSWORD=your_password_here
```

3. Start the aplicación:

```
docker compose up --build
```

🌐 Available Services

- Salud del backend: http://127.0.0.1:8000/api/health
- Documentación API: http://127.0.0.1:8000/docs
- Frontend: http://localhost:5173

🛑 Stoping the Aplicación

```
docker compose down
```

📁 Proyecto Structure

```
src/
  backend/
    aiuda_backend_fastapi.py # API principal
    scripts/                          # Lógica de procesamiento
  frontend/                           # Aplicación React
jobs/                                 # Datos y salidas de tareas
logs/                                 # Registros por tarea
```

⚡ Quick commands

```
# Build and launch
docker compose up --build

# Stop
docker compose down

# Backend Logs
 docker compose logs -f backend

# Frontend Logs
docker compose logs -f frontend
```
