AIUDA

User manual

In this document, we will see how to use the Aiuda platform

We will see that in just a few steps; we can transform educational materials into more accessible content for our students and our educational community.

Aiuda is an online platform that can assist us with the following tasks:

- Generating subtitles for a video and plain text transcripts from an audio file.
- Running an accessibility evaluation on our presentations (color, vision, font size, etc.).

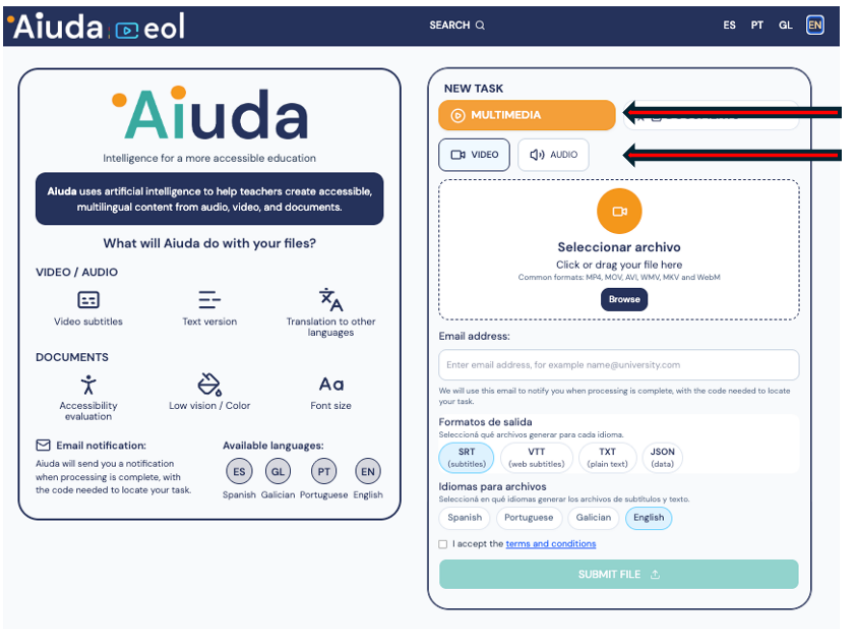

To understand how to work with Aiuda in each of these processes, please follow the instructions below.

Retrieving Video Subtitles and Audio Transcripts

To get started, select the type of task you want to perform. Let's begin by uploading a video to obtain its subtitles.

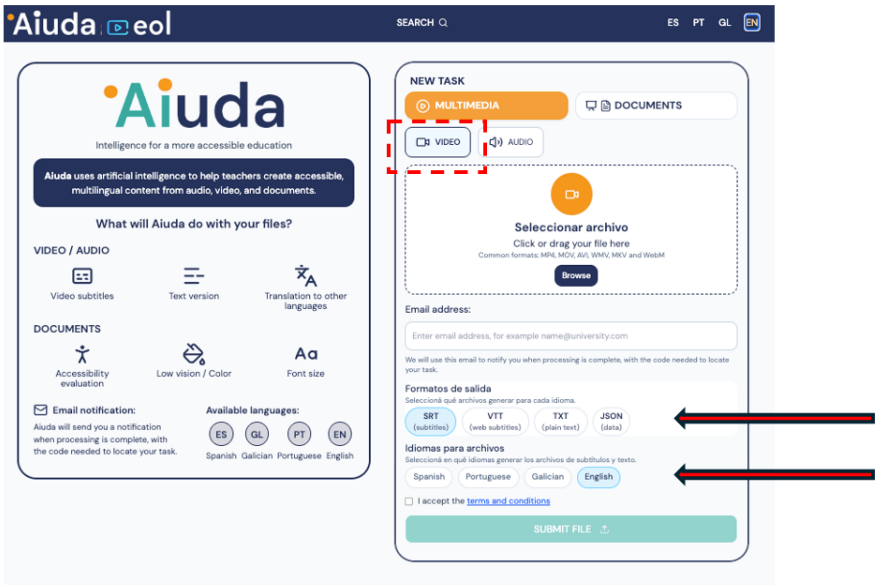

At the top of the screen, click on "Multimedia".

Next, specify whether you want to process a video or an audio file.

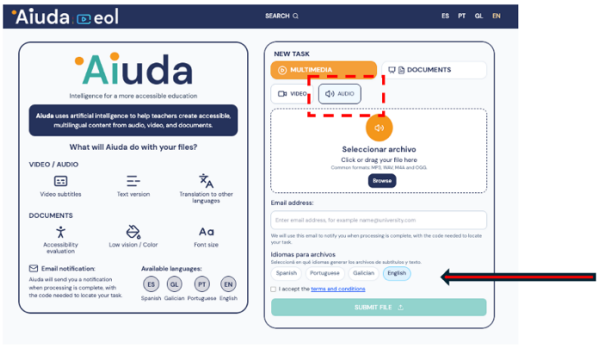

If you select a video, Aiuda will offer to generate subtitles in the most widely used formats: srt and vtt. It also allows you to obtain transcripts in plain text (.txt) and in JSON data format.

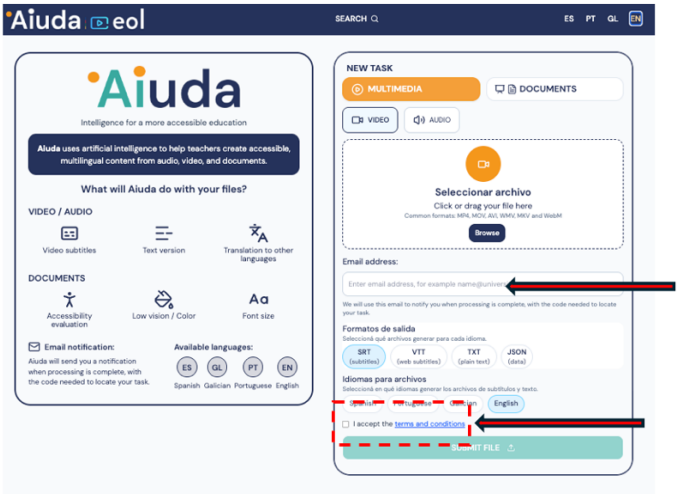

Immediately below these options are the buttons where you can specify the language in which you want to retrieve the subtitles. These are the native languages of Aiuda's creators: Spanish, Portuguese, and Galician, and we have added English as the lingua franca of academia.

If you select an audio file, you will only be able to obtain the plain text transcript, leaving only the language selection option available.

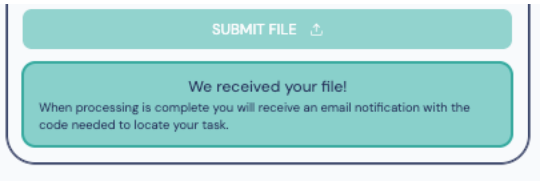

Now, click on "Browse" (Examinar) and select the file you want to process in one of the indicated formats. Then, enter your email address and check the box to accept the "Terms and Conditions".

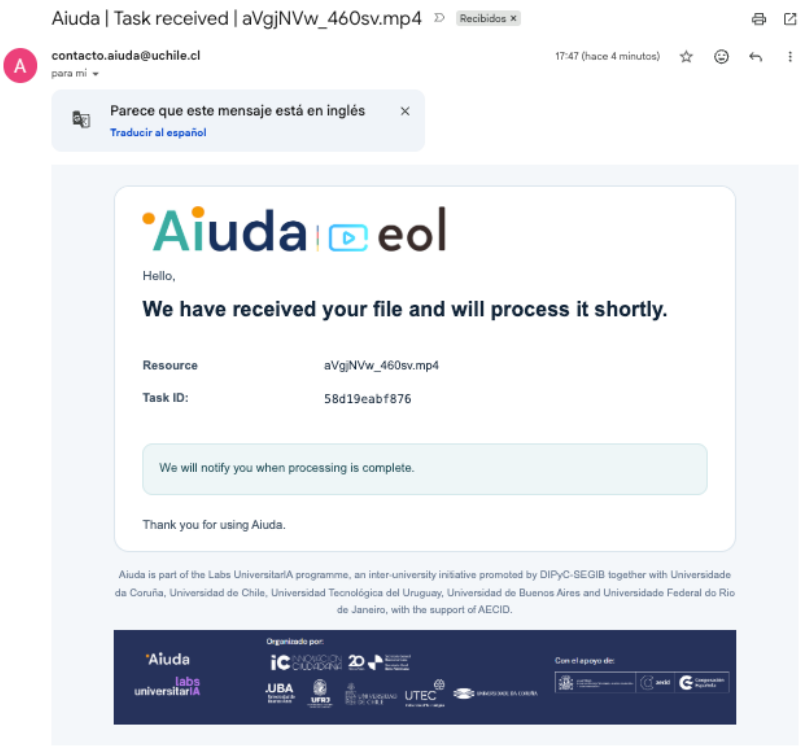

You can read the Terms and Conditions at the same link.

Finally, click the "Send File" (Enviar Archivo) button.

The application will display the following message: "We received your file!" (¡Recibimos tu archivo!)

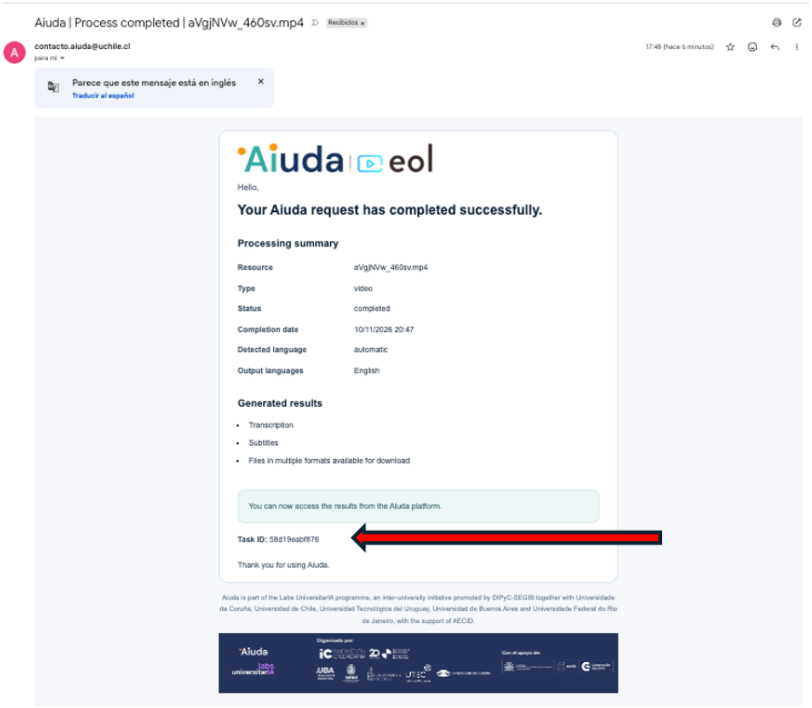

At the email address you specified, you will receive an email with the subject "Aiuda | Task received..." and the name of the file you uploaded. This email informs you that processing has started; you can now perform other tasks while Aiuda works for you.

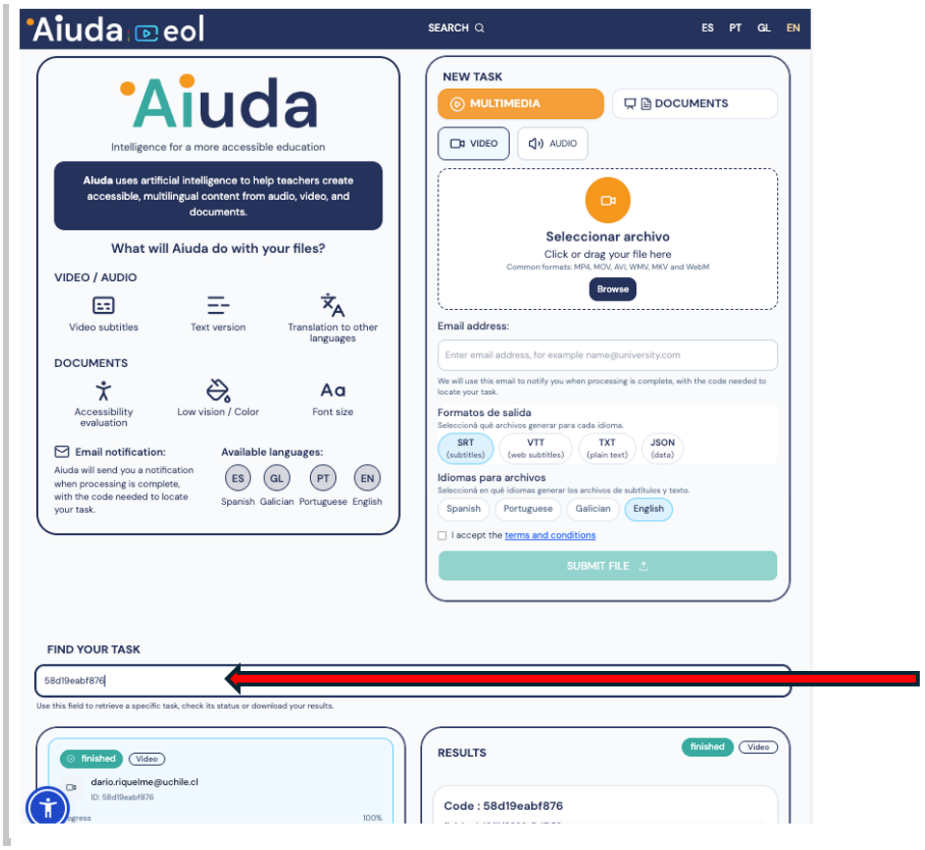

Aiuda processes all files in sequential order, so if the platform is experiencing high demand, it may take a little longer.

Once processing is complete, you will receive a new email with the subject "Aiuda | Process completed" and the name of the file you uploaded.

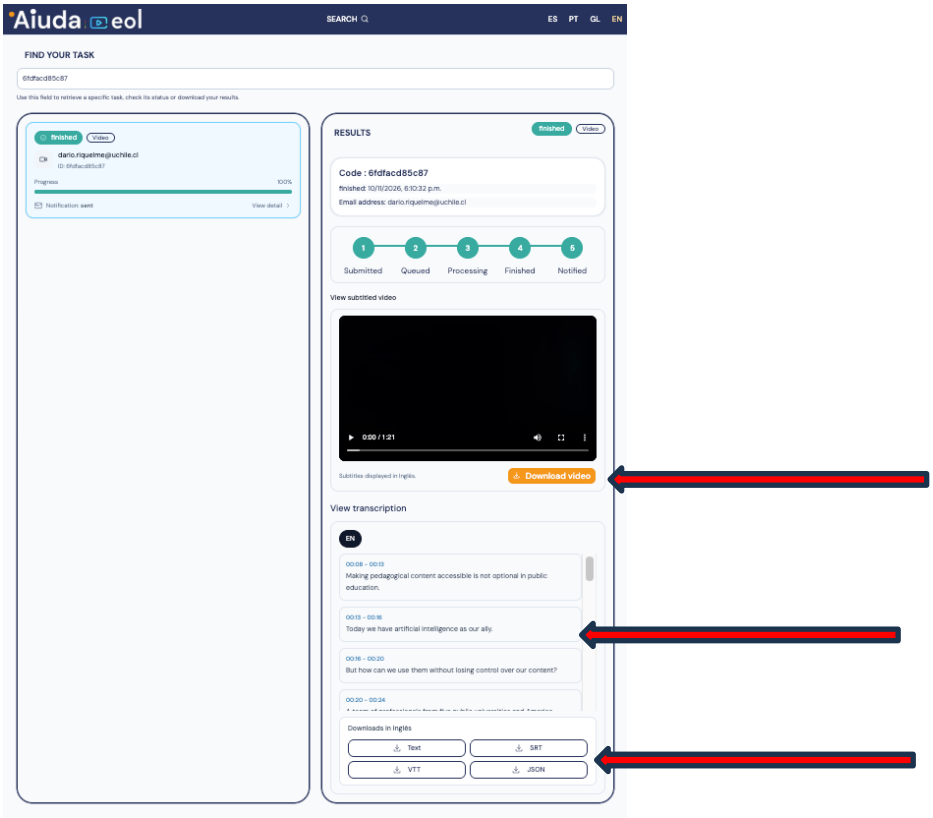

This email contains the "Task ID" on the server. This number is important, as you will use it to retrieve your processed results.

With the "Task ID", return to the Aiuda platform and enter the number in the "Locate your Task" section.

Entering the code will open the results screen.

Here you will find the video with the automatically generated subtitles embedded in it; you can download it directly this way if you need it urgently.

A little further down, you will see the generated subtitle text, and at the bottom, the buttons to download the files in the different formats offered.

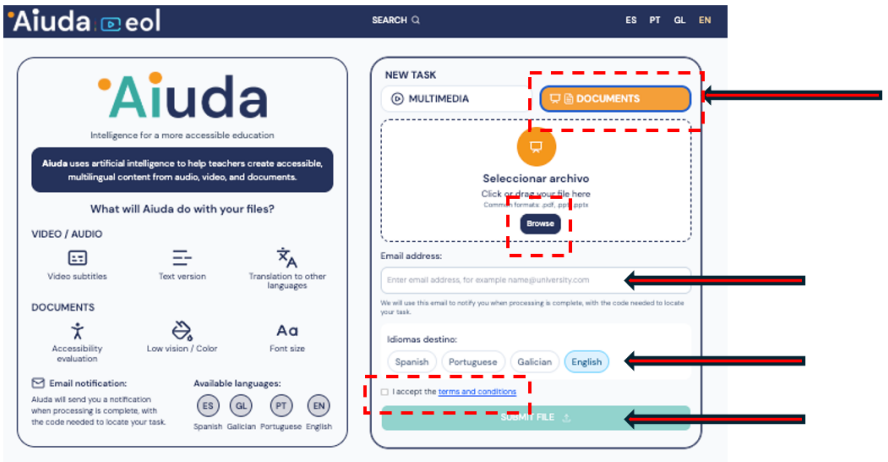

We recommend downloading the subtitles and adapting them to your organization's local culture, as well as correcting the small percentage of errors that all AI models make when performing this task.

Document Accessibility Evaluation

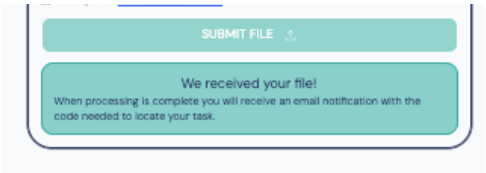

For Aiuda to perform an accessibility evaluation, go to the "New Task" (Nueva Tarea) section, select "Documents" , and upload your PDF or PPT file.

Enter the email address where you want to receive notifications and select the language in which you want to download the report.

Then, accept the "Terms and Conditions" and click "Send File" to start processing.

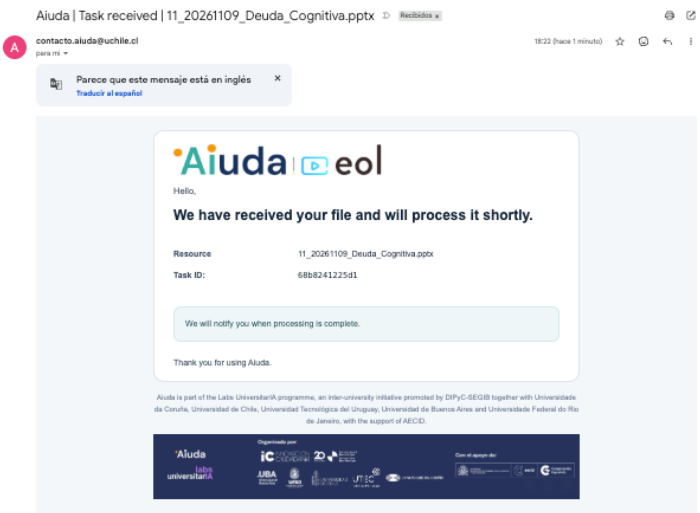

The platform will display the message "We received your file!"

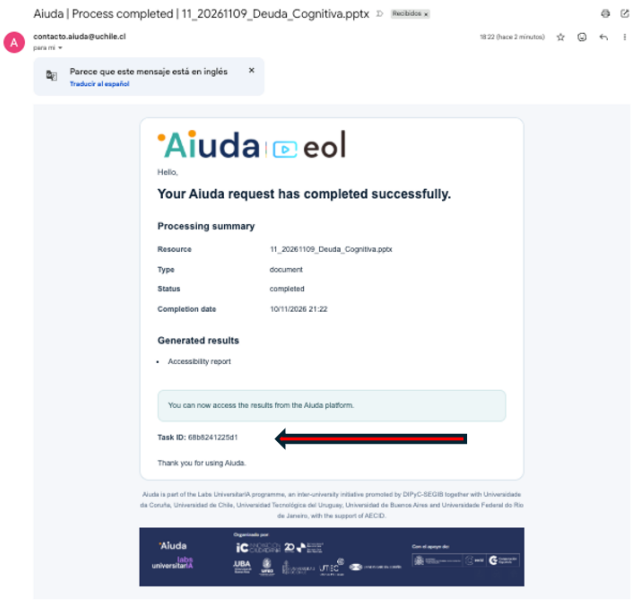

and you can now carry out other activities while Aiuda works for you.

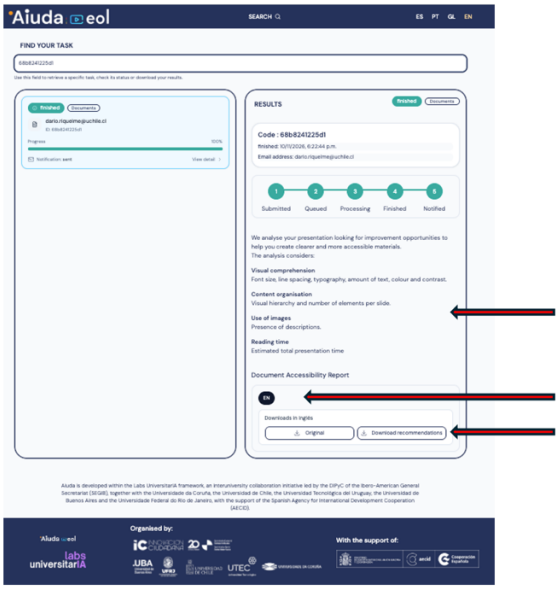

Once sent, you will receive an email with the subject "Aiuda | Task received..." and the file name, confirming that the file was successfully received.

Once the platform finishes working, you will receive a second email with the subject "Aiuda | proceso terminado" (Process finished) and the file name. This email contains a code that you will use to retrieve the report.

Return to the Aiuda platform and enter that code in the "Locate your Task" (Localiza tu tarea) section.

On the side, the analysis that was performed will appear along with the language in which you can download the report.

Click the "Download Recommendations" (Descargar Recomendaciones) button to obtain the report.

We hope you make the most of "Aiuda" — Technology that supports, intelligence that includes.
